

What is the Glean Urodynamics Study?

Glean is a specialized study designed to evaluate how well your lower urinary tract is working. It helps diagnose issues that cause symptoms such as:

- Urine leakage
- Frequent urination
- Persistent feeling of the urge to urinate
- Difficulty emptying your bladder

The primary goal is to understand how your bladder stores and releases urine, helping your doctor pinpoint and treat specific bladder problems.

BEFORE

How to Prepare for your Glean study

1. Arrive with a comfortably full bladder
2. Wear loose, comfortable clothing
3. Bring something to keep yourself entertained during waiting periods
4. Continue your normal diet and take routine medications
5. If you take bladder medication, consult your doctor about whether to pause it before the test
6. No need for a driver

DURING

What to expect from your Glean study

In your doctor's office, two small sensors will be placed to see how your bladder fills and empties. This step takes just a few minutes.

You'll then go about your visit while the sensors collect data. The total time will vary depending on your symptoms, but a typical Glean visit takes 2–4 hours.

During the study, you will be asked to drink fluids and note any bladder symptoms you experience. A toilet will be available to you throughout.

At the end of the study, you'll return to the exam room to have the sensors removed — you'll be free to leave at that time.

AFTER

What to expect after the Glean study

- You may go home or return to work immediately after your study.
- Your doctor will contact you to review the results of your Glean study and discuss your treatment plan going forward.

Getting Your Results

Your doctor will walk you through your results and collaborate with you on any recommended next steps, including further testing and treatment plans.

SAFETY INFORMATION

Please refer to www.GleanUDS.com/patient for safety information related to Glean.

“I walked into today's appointment unsure of what to expect and walked out relieved. Today's experience with Glean was better than I anticipated. The technology is incredible. I am finally going to get real answers.”

– Kate S. (Glean Patient)
